

A NEW BEGINNING of

Journal of comprehensive molecular science and genetics is open access, covered academic disciplines, including molecular Biology, cellular biology, pathophysiology, epidemiology, clinic trials. The journal welcomes submission in broad areas of article types, including original research, Review, Letter/Comment/Communications, Hypothesis, Protocol, Perspective, Meta-analysis, Case report, Editorial, and Others.

History

Journal of Comprehensive Molecular Science and Genetics was founded in 2021 by the International Medical and Health care association (IMHCA). IMHCA is a not-profit organization registered at Edmonton, Alberta, Canada. The vision of IMHCA is to facilitate medical and healthcare knowledge communication, enhance knowledge exchange inter-researchers in the world. Currently, our journal is a led by two chief editors, and peer-reviewed by five editors and more than 50 reviewers.

The Future

We are committed to spread knowledge, accelerate innovation, and promote knowledge sharing. And ultimately accelerate knowledge innovation and health progress. All revenues will re-invest to improve the knowledge sharing system and develop new scientific applications.

Principle

We are committed to continual innovation, generating knowledge faster, more efficient sharing knowledge, promoting scientific progress. The goals of our journal are to provide a platform for the exchange of scientific research outcomes and evidence-based practices, and create a rigorous review system to ensure the credibility of scientific research outcome. And ultimately to enhance the practical application of research outcomes. Once published, the article is open access and freely available online.

Mission

Our journal is to provide an open access platform and make science open. Advances in science is the foundation of human progress and development. We want to supply an open access and public platform to serve the global knowledge sharing and knowledge exchange. To ensure openly available pipeline to generate more knowledge, accelerate innovation, and promote human health and prosperity.

This is the new beginning of our journal, we believe that, we can build a platform for comprehensive references in biology, biomedicine, neuroscience, pharmacology, and immunology, and disseminate the forefront research of high significance worldwide, and making a modest contribution to the development of human medical health.

This year, Journal of Comprehensive Molecular Science and Genetics is celebrating its 1th birthday. We sincerely invite you to join us and be a part of the development of world's medical health.
